
◆ CORE SYSTEM OVERVIEW

ID: KB-001

Module: Overview

Intent: Definition

Role: All

Triggers: what is adpt-db, platform overview

Answer:

ADPT-DB is a web application for creating custom databases through form design, tracking usage insights, managing activities, and supporting role-based operations for users and admins.

ID: KB-002

Module: Overview

Intent: Modules_List

Role: All

Triggers: main modules, system modules

Answer:

The main modules include User Dashboard, Form Builder, My Databases, Nearby Store Locator, Analytics, AI Assistant, Activity History, User Settings, and Admin Dashboard (User Management, Email Center, Query Management, Admin Settings).

◆ ROLE & ACCESS CONTROL

ID: KB-003

Module: Authentication

Intent: Access_User_Dashboard

Role: User

Triggers: who can access user dashboard

Answer:

Any authenticated user with a standard user role can access the User Dashboard after sign-in.

ID: KB-004

Module: Authentication

Intent: Access_Admin_Dashboard

Role: Admin

Triggers: who can access admin dashboard

Answer:

Only authenticated users with admin role metadata can access admin pages and admin APIs.

ID: KB-005

Module: Authentication

Intent: Post_Login_Routing

Role: All

Triggers: after login redirect

Answer:

After sign-in, the system checks role metadata and redirects admins to the admin dashboard and standard users to the user dashboard.

 DASHBOARD

ID: KB-006

Module: Dashboard

Intent: Purpose

Role: User

Answer:

Dashboard Home provides a quick operational overview using summary cards, quick actions, and recent activity snapshots.

ID: KB-007

Module: Dashboard

Intent: Data_Source

Role: User

Answer:

Dashboard values currently use predefined metrics and sample activity content for visualization.

MY DATABASES

ID: KB-008

Module: My Databases

Intent: Purpose

Role: User

Answer:

My Databases allows users to create, search, organize, and manage database entries built from custom form schemas.

ID: KB-009

Module: My Databases

Intent: Search

Role: User

Answer:

Users can search databases by name using a search input that filters database cards dynamically.

ID: KB-010

Module: My Databases

Intent: Security

Role: User

Answer:

Databases can be password-protected, requiring authentication before access.

ID: KB-011

Module: My Databases

Intent: Edit_Delete

Role: User

Answer:

Users can edit schema structure, modify passwords, view entries, and delete databases from action controls on each database card.

FORM BUILDER

ID: KB-012

Module: Form Builder

Intent: Definition

Role: User

Answer:

Form Builder is a drag-and-drop workspace where users design custom form schemas defining database fields.

ID: KB-013

Module: Form Builder

Intent: Add_Field

Role: User

Answer:

Users add fields by dragging templates from the sidebar into the canvas.

ID: KB-014

Module: Form Builder

Intent: Reorder_Fields

Role: User

Answer:

Fields can be reordered directly in the canvas using drag-and-drop interactions.

ID: KB-015

Module: Form Builder

Intent: Edit_Field_Properties

Role: User

Answer:

Field properties such as label, placeholder, required state, limits, options, helper text, and layout span can be configured from the edit panel.

ID: KB-016

Module: Form Builder

Intent: Preview

Role: User

Answer:

Preview mode allows users to validate form layout and behavior before saving.

ID: KB-017

Module: Form Builder

Intent: Export

Role: User

Answer:

Form schemas can be exported as JSON for external documentation or integration workflows.

ID: KB-018

Module: Form Builder

Intent: Auto_Save

Role: User

Answer:

In-progress form changes are temporarily stored in browser local storage during the active session.

ID: KB-019

Module: Form Builder

Intent: Persistence

Role: User

Answer:

Final form schemas are persisted in the backend database under the authenticated user upon save.

ID: KB-020

Module: Form Builder

Intent: Supported_Field_Types

Role: User

Answer:

Supported field types include text blocks, inputs, textarea, password, OTP, checkbox, switch, date picker, tag input, select controls, slider, file upload, and rating.

◆ ANALYTICS

ID: KB-021

Module: Analytics

Intent: Purpose

Role: User

Answer:

Analytics provides chart-based insights including metrics for records, views, users, and usage distribution.

ID: KB-022

Module: Analytics

Intent: Real_Time

Role: User

Answer:

The analytics dashboard currently uses predefined datasets for visualization purposes.

◆ AI ASSISTANT

ID: KB-023

Module: AI Assistant

Intent: Purpose

Role: User

Answer:

AI Assistant is a conversational interface for asking data-related questions and receiving guided responses.

ID: KB-024

Module: AI Assistant

Intent: Production_Depth

Role: User

Answer:

The assistant demonstrates structured interaction patterns and can be extended with deeper domain reasoning and live integrations.

◆ ACTIVITY HISTORY

ID: KB-025

Module: Activity History

Intent: Purpose

Role: User

Answer:

Activity History shows timeline-based operational logs including actor, action, target, and time context.

ID: KB-026

Module: Activity History

Intent: Filtering

Role: User

Answer:

The module supports filtering and paginated browsing of activity records.

◆ USER SETTINGS

ID: KB-027

Module: User Settings

Intent: Configuration

Role: User

Answer:

Users can configure profile preferences, notifications, appearance mode, accent color, security preferences, and database behavior settings.

◆ NEARBY STORE LOCATOR

ID: KB-028

Module: Nearby Store

Intent: Purpose

Role: User

Answer:

Nearby Store Locator searches nearby places using query, coordinates, radius, result limit, and sorting preferences.

ID: KB-029

Module: Nearby Store

Intent: API_Source

Role: User

Answer:

Search requests are handled through an internal API route that proxies to an external Places API provider.

ID: KB-030

Module: Nearby Store

Intent: Output_Format

Role: User

Answer:

Results include status messages, detailed lists, interactive map markers, and export-ready tabular views.

ID: KB-031

Module: Nearby Store

Intent: Export

Role: User

Answer:

Search results can be exported in CSV and JSON formats.

ID: KB-032

Module: Nearby Store

Intent: Result_Fields

Role: User

Answer:

Each result may include name, address, categories, distance, coordinates, and telephone information when available.

ID: KB-033

Module: Nearby Store

Intent: Map_View

Role: User

Answer:

Map View displays results on an interactive map with contextual marker details.

ID: KB-034

Module: Nearby Store

Intent: Theme

Role: User

Answer:

The module supports both dark and light presentation modes.

 ADMIN MODULES

ID: KB-035

Module: Admin - User Management

Intent: Purpose

Role: Admin

Answer:

Provides user overview with role context, search, and management controls.

ID: KB-036

Module: Admin - Email Center

Intent: Purpose

Role: Admin

Answer:

Allows admins to compose announcements targeting all users, active users, inactive users, or admins.

ID: KB-037

Module: Admin - Query Management

Intent: Purpose

Role: Admin

Answer:

Enables admins to manage support queries through filtering, reviewing, replying, and status updates.

ID: KB-038

Module: Admin - Settings

Intent: Configuration

Role: Admin

Answer:

Admin Settings control appearance, notifications, security policies, autosave behavior, retention rules, and backup cadence.

ID: KB-039

Module: Admin - Settings

Intent: Danger_Zone

Role: Admin

Answer:

Includes high-impact actions intended for major resets or destructive workflows.

 BACKEND & ARCHITECTURE

ID: KB-040

Module: Backend

Intent: Authentication

Role: All

Answer:

Authentication uses an external provider with protected routes and role-aware access checks.

ID: KB-041

Module: Backend

Intent: Authorization

Role: All

Answer:

Authorization is role-based, with admin-only routes and APIs enforcing privilege validation.

ID: KB-042

Module: Backend

Intent: Database

Role: All

Answer:

The backend uses MongoDB for user and form schema persistence.

ID: KB-043

Module: Backend

Intent: User_Mapping

Role: All

Answer:

Users are mapped between authentication provider and backend using provider user ID as the backend identifier.

ID: KB-044

Module: Backend

Intent: Auto_User_Creation

Role: All

Answer:

First-time authenticated users trigger automatic backend user creation.

ID: KB-045

Module: Backend

Intent: Core_APIs

Role: All

Answer:

Core APIs include form create/list endpoints, admin user listing, user-create API, and nearby search API.

ID: KB-046

Module: Frontend

Intent: Tech_Stack

Role: All

Answer:

Frontend uses Next.js with React, component-based UI patterns, charting tools, drag-and-drop utilities, map libraries, and theme management.

ID: KB-047

Module: Nearby Store

Intent: Missing_Credentials

Role: User

Answer:

If API credentials are missing, the search API returns an error indicating missing token configuration.

 WORKFLOW SHORTCUTS

ID: KB-048

Module: My Databases

Intent: Quick_Create

Role: User

Answer:

To create a database quickly: go to My Databases, select Create New Database, design fields in Form Builder, preview, and save.

ID: KB-049

Module: Form Builder

Intent: Schema_Documentation

Role: User

Answer:

Use schema export to download JSON and share with external systems.

CHATBOT RETRIEVAL RULES

ID: KB-050

Module: AI Assistant

Intent: Retrieval_Pattern

Role: All

Answer:

Use intent-first retrieval based on module name, user role, and task action. Responses should include navigation path, steps, expected result, and role restrictions.

ID: KB-051

Module: AI Assistant

Intent: Role_Clarification

Role: All

Answer:

Questions about inaccessible pages, missing menus, or permission errors should trigger role clarification logic.

ID: KB-052

Module: AI Assistant

Intent: Troubleshooting

Role: All

Answer:

Queries involving failed search, empty results, missing exports, login redirects, or admin page access should trigger troubleshooting guidance.

ID: KB-053

Module: Knowledge Base

Intent: Structure

Role: System

Answer:

This knowledge base uses structured Q&A formatting optimized for retrieval precision and consistent chatbot responses.

NEW FEATURES UPDATE

ID: KB-054

Module: Task Manager

Intent: Purpose

Role: User

Answer:

Task Manager supports task creation, status updates, and task lifecycle management through dedicated task APIs and UI workflows.

ID: KB-055

Module: Database Records

Intent: Bulk_Operations

Role: User

Answer:

Database records support bulk operations for faster high-volume data handling.

ID: KB-056

Module: Database Security

Intent: Forgot_Password_Reset

Role: User

Answer:

Password-protected databases support OTP-based forgot-password reset flows.

ID: KB-057

Module: Database Builder

Intent: Computed_Columns

Role: User

Answer:

Computed columns can be configured for derived values based on existing record fields.

ID: KB-058

Module: Inventory

Intent: Stock_Management

Role: User

Answer:

Stock management endpoints support inventory tracking per database.

ID: KB-059

Module: Inventory

Intent: Replenishment_Recommendations

Role: User

Answer:

The system provides replenishment recommendation support for stock planning scenarios.

ID: KB-060

Module: Analytics

Intent: AI_Summary

Role: User

Answer:

Analytics includes AI summary support and expanded overview, visit, and detailed metrics routes.

ID: KB-061

Module: Collaboration Network

Intent: Shared_Databases

Role: User

Answer:

Network modules include shared database capabilities for collaborative workflows.

ID: KB-062

Module: Chat

Intent: Messaging_Features

Role: User

Answer:

Chat features include friend discovery, requests, direct messaging, group messaging, read tracking, and message management endpoints.

ID: KB-063

Module: Shared Database

Intent: Feature_Overview

Role: User

Answer:

Shared Database allows users to collaborate by sharing selected databases with other authorized users while preserving role-based access control.
