

Odoo Hackathon 2026

Virtual Round (8hrs)

Imp Points:

Hackathon Execution Planning Prompt (Optimized for an 8-Hour Hackathon)

Use the following prompt to generate a **practical and fast execution plan** for completing a hackathon project within **8 hours**.

Prompt

I want you to help me create a **clear and practical execution plan for an 8-hour hackathon project** based on the following problem statement.

Problem Statement:

[Enter your problem statement here]

The response should be beginner-friendly, structured, and focused on **building a working demo within 8 hours**.

1. Quick Market Research (Fast Analysis)

Provide a **short but insightful analysis** of the current landscape.

Include:

Existing Solutions

- Mention existing apps, platforms, or technologies solving this problem.
- Explain briefly how they work.

Market Gaps

- What problems are still **unsolved or inefficient**?

Target Audience

Identify:

- Who will use the solution?
- Their main needs or challenges.

User Pain Points

Explain the **key problems faced by users** that your solution will solve.

Relevant Trends

Mention:

- Current technologies used in this domain
- Any relevant statistics or trends (India/global)

Note: Keep this section concise since hackathons focus on execution.

2. 8-Hour Execution Plan

Create a **clear hour-by-hour roadmap** for building the project.

Hour 1 — Idea Finalization

- Understand the problem
- Brainstorm 2–3 solution ideas
- Choose the best idea
- Define core features
- Decide technology stack

Hour 2 — Project Setup

- Create GitHub repository
- Setup frontend project
- Setup backend server
- Define API structure
- Prepare database schema

Hour 3–5 — Core Development

- Frontend UI development
- Backend API development
- AI/ML integration (if needed)
- Build main functionality

Hour 6 — Integration

- Connect frontend and backend
- Test API calls
- Fix integration errors

Hour 7 — Testing & Improvements

- Fix bugs
- Improve UI
- Ensure smooth user flow
- Add loaders or error messages

Hour 8 — Demo & Presentation

- Prepare demo flow
 - Create quick pitch explanation
 - Practice explaining the solution
-

3. Team Roles for Maximum Efficiency

Assign roles clearly for a 4-member team.

Example:

Frontend Developer

- Build UI components
- Connect frontend to APIs
- Improve user experience

Backend Developer

- Create APIs
- Handle database
- Manage authentication or core logic

AI/ML Engineer

- Integrate pre-trained models or AI APIs
- Implement AI features
- Optimize prompts or predictions

Integration Lead

- Connect all modules
- Ensure full system works
- Test the complete workflow

4. Minimum Viable Product (MVP)

Define the **simplest version of the product that demonstrates the core idea**.

Focus only on:

- Essential functionality
- Basic UI
- One clear user workflow

Explain why this MVP is enough for a **hackathon demo**.

5. Unique Selling Proposition (USP)

Explain what makes this project **stand out to judges**.

Include:

- Innovative features
 - Real-world usefulness
 - AI usage (if relevant)
 - Future scalability
-

6. Tech Stack Options

Provide **2–3 possible technology stacks** for building the solution.

Option 1 — Fast Hackathon Stack

Example:

- React
- Node.js / Express
- MongoDB
- OpenAI or Gemini API

Best for **rapid development and quick demo**.

Option 2 — Scalable Production Stack

Example:

- Spring Boot
- React
- PostgreSQL
- Cloud deployment

Best for **future scalability**.

Option 3 — AI-Focused Stack

Example:

- Python
- FastAPI
- HuggingFace models
- Firebase

Best for **AI-driven applications**.

7. Pitch Deck Structure

Generate a **simple pitch deck outline** for presenting the project.

Slides should include:

1. Problem Statement
 2. Market Insights
 3. Proposed Solution
 4. Product Demo
 5. MVP Features
 6. Unique Selling Proposition
 7. Technology Stack
 8. Future Roadmap
 9. Team and Roles
-

8. Tips for Winning an 8-Hour Hackathon

Provide practical advice such as:

Focus on the Demo

Judges care more about a **working demo** than perfect code.

Build an MVP First

Do not try to build too many features.

Keep UI Clean

A clean UI creates a strong impression.

Tell a Strong Story

Explain:

Problem → Solution → Impact.

Time Management

Follow the 8-hour plan strictly.

Important Instruction

Ensure the response is:

- Practical for **8-hour hackathons**
- Beginner-friendly
- Focused on **fast development and clear demo**
- Helpful for impressing judges through **innovation, usability, and presentation**
